

## Design Architecture

We work with our clients to develop ICT strategies that improve business performance and align ICT solutions with business plans and defined business outcomes

We know business needs change. We architect and implement reliable, flexible ICT solutions that evolve and leverage advances in technology when they need to. Our ICT solutions are based on sound design processes aligned to business goals and can be easily integrated into existing systems

### Business benefits

Deliver a capital and operational plan that can be used as the platform to align business and ICT objectives, while providing flexibility and adaptability

Risk identification and risk assessment to identify potential threats to your ICT environment and the likelihood of those becoming reality

Business impact analysis to quantify the impact of a loss of ICT services on your business

Implementation of solutions that feature the right combination of technologies to your business needs

Scalable solutions in line with your budget and future growth

### Solution

#### **We design and implement:**

Consolidated data centres, maximising virtualisation technologies

Converged networks

Storage, backup and recovery solutions

Remote desktop solutions for network access 'on any device, from anywhere'

Enterprise systems for AIX, Solaris, HP-UX and IBM AS400

Hardware, software and existing asset integration with locane infrastructure

# Key features

The management of infrastructure is becoming more integrated and requires significant technical expertise and experience, support processes and continual education and training of staff to maximise the benefits of technology decisions. There is also a need to bridge the gap between business requirements and technology.

## ● Tailored design

locane's ICT solutions are based on sound design processes aligned to business goals and can be easily integrated into existing systems. Our solutions are scalable, to fit available budgets and adjust to business growth. We partner with all the leading ICT vendors to design and implement solutions that feature the right combination of technologies.

## ● Flexible and highly effective central management of devices

locane adheres to vendor and industry best practice. We develop flexible solutions that will enable fast and efficient deployment and implementation with a structured approach and capability to test upgrades in an isolated environment. Virtualisation, shared storage and other shifts in technologies have provided capability to better manage and share 'pools' of resources to ensure that failure of any one particular device does not necessarily mean a loss of service until the device is fixed. We allow for spare capacity to enable new or prospective applications or tools to be deployed.

## ● Platform management

locane Managed Service offerings are designed to meet business goals and deliver strategic technology advice to meet changing business requirements in addition to the ongoing management of infrastructure. All technology selections are developed with a long-term view based on immediate and future objectives. We partner with our clients to evaluate the applicability or potential benefit of new infrastructure and integration technologies. This consistent deployment, management and use of best practice process and critical evaluation minimise business disruptions whilst maximising business benefits.

## ● Manage ICT risk

Some companies cannot survive without their ICT infrastructure. We work through a risk identification and business impact analysis with our clients to determine if the cost of the provision of disaster recovery equipment outweighs the potential risk. Clients get to determine the extent of their disaster recovery requirements and invest accordingly. Our expertise across our vendor products means we design and implement secure, robust, flexible and cost effective solutions tailored to your organisation's specific business needs.

## Complementary Services

**We know business needs change. We architect and implement reliable, flexible ICT solutions that evolve and leverage advances in technology and align with your business goals and requirements.**

**Our Managed Services extend to:**

Monitoring, management, maintenance and reporting of all ICT infrastructure including server, storage, network and security devices

Onsite engineering

Service desk

**Complementing locane Managed Services is locane's secure infrastructure platform offerings:**

Infrastructure as a Service

Disaster Recovery as a Service

Backups as a Service

Licensing as a Service

Burst to Cloud

Self service provisioning

## Why locane?

With more than 14-years of experience, we are one of South Australia's largest independent ICT solutions providers. We have a reputation for delivering innovative, value for money solutions.

We offer an integrated range of services and expertise to meet the ever-changing technology needs of business.

Our approach is different. We focus on the delivery of tailored ICT solutions that add value and deliver real results to business.

Our focus is about finding the right ICT solution for each business. We offer reliable, flexible ICT systems to help our clients manage their current and future needs.
