

Desktop as a Service

In today's technology-based world it's rare not to have a smartphone, computer or tablet at your fingertips at all times. We're often working from a range of locations, tapping into multiple devices throughout the day to complete different tasks.

Desktop as a Service (DaaS), allows you to access the apps and programs typically hosted on your desktop via the Cloud instead, using any device, at any time.

The locane data centre hosts the virtual desktops in the Cloud and locane is responsible for the infrastructure requirements, the management of your virtual desktop and tailoring the level of service to suit your business.

Business benefits

Security – you'll always be using the most up to date software, with your data protected by seamless disaster recovery and high level security

Safety – if your device is broken or stolen, you won't lose any data

Accessibility – you'll have access to your desktop programs and apps via all of your devices, anytime and anywhere

Efficiency – save time and money by accessing quality ICT services without the need for a dedicated systems administrator and the ongoing requirement to upgrade company owned software and hardware

Flexibility – you can scale up or down DaaS, as needed

Resiliency – DaaS offers a fully redundant infrastructure, providing a highly resilient environment at lower cost

Increased productivity – your business will deliver smarter, more efficient work practices

Key features

● DaaS helps you to meet the challenges of an increasingly complex ICT environment

Businesses today face the ongoing challenge of investing in and supporting new business initiatives requiring ICT and improving end user experiences, while facing limited budgets. Often these challenges involve making computing resources easier to access and use, regardless of physical and geographical location. DaaS means employees can work anywhere, with a consistent user experience, from PCs, laptops, tablets and smartphones. They are even able to use their own technology to access the programs and apps they need for their work.

● Increase productivity and reduce cost

DaaS supports your business to optimise productivity anywhere people work with universal access to virtual apps, desktops and data from any device. This reduces ICT complexity and offers flexibility, in turn reducing application and desktop management costs. DaaS can furthermore reduce or eliminate capital expenditures for seasonal workloads or unexpected demand by offering a solution that can be scaled up or down to meet requirements.

● Protect your data

DaaS centralises and secures your information in the locane data centre, creating a simple solution that helps protect intellectual property, ensures data privacy and enables effective risk management.

Incident response and disaster recovery are also inherently simpler with DaaS. Centralised data is easier to monitor and manage. Issues that arise can be patched or similarly dealt with from a central location, instead of having to access potentially hundreds of computers and devices across multiple locations.

If laptops and other devices are destroyed or unreachable in a disaster, employees can access their applications and data from other devices in a different location.

● Streamlined Support

Software management, validation and support are simplified as they are centrally undertaken, at the locane data centre. The same applies to security policy changes or implementation and adding, moving, and changing users. Daily system updates and management ensures continuity of service and reliability.

● Predictable costs

locane's DaaS is available for a monthly fee and incorporates hardware, software, management and administrative access. This monthly operational cost is aligned to the resources that your business uses. By running your business systems through locane's infrastructure platform you avoid the significant capital costs of equipment procurement or upgrades, licensing, data centre establishment or co-location fees, alongside reduced operational costs for support, management and administration.

Complementary Services

We know business needs change. We architect and implement reliable, flexible ICT solutions that evolve and leverage advances in technology and align with your business goals and requirements. Our services include:

ICT strategy

ICT consulting

ICT architecture

Infrastructure as a Service

Managed Services

Disaster Recovery as a Service

Backup as a Service

locane has the capability to design business solutions and applications that can integrate with disparate systems. This ensures you can access crucial information and applications to meet specific business requirements.

Why locane?

With more than 14-years of experience, we are one of South Australia's largest independent ICT solutions providers. We have a reputation for delivering innovative, value for money solutions.

We offer an integrated range of services and expertise to meet the ever-changing technology needs of business.

Our approach is different. We focus on the delivery of tailored ICT solutions that add value and deliver real results to business.

Our focus is about finding the right ICT solution for each business. We offer reliable, flexible ICT systems to help our clients manage their current and future needs.
