Disaster Recovery as a Service

Iocane delivers tailored disaster recovery solutions to ensure operational continuity and the rapid recovery of your business-critical ICT infrastructure

Business benefits

Risk identification and risk assessment to find potential threats to your ICT and the likelihood of those becoming reality

Business impact analysis to quantify the impact of a loss of ICT services on your business

Development of tailored disaster recovery and business continuity management strategies

Reliable, proven processes, products and technologies to rapidly restore business-critical ICT if a disaster strikes

Cost effective disaster recovery solutions delivering protection where you need it most

Ongoing testing of your disaster recovery plans

24 hours a day, 7 days a week data centre monitoring and support

A world-class, secure platform to ensure your data cannot be accessed by other parties

Solution

Iocane's Disaster Recovery as a Service (DRaaS) delivers an efficient disaster recovery solution that will:

Identify risk

Analyse business impact

Deliver continuity of ICT services management

Provide for backup, disaster recovery and data archiving

Integrate with existing hardware, software and infrastructure assets

iocane™

Innovative IT Solutions

Better for business

Key features

Manage ICT risk

Could your organisation survive without its ICT infrastructure? We work with you to identify risk and complete a business impact analysis. Through this process we will determine if the cost of the provision of disaster recovery equipment outweighs the potential risk. We will work with you to determine the extent of your disaster recovery requirements so you can invest accordingly. Our depth of expertise and knowledge of our ICT vendor partners' products means we design and implement secure, robust, flexible and cost effective solutions tailored to your organisation's specific business needs. We are also able to work with different, older or less expensive hardware for disaster recovery to reduce costs.

Restore vital business functions rapidly

ICT recovery infrastructure is a vital part of a business' continuity plan. The benefit of our secure disaster recovery infrastructure is that ICT functionality can be restored quickly thus enabling business functions reliant on ICT to continue. Our DRaaS allows for the restoration of all ICT services from an application or system failure to a complete loss of the business premises or data centres. Iocane also offers Backup as a Service (BaaS) to complement DRaaS and deliver a full disaster recovery service.

Reliable, proven processes, products and technologies

Iocane designed, tested and deployed technical processes ensure the recovery of business critical servers in a timely manner and in line with business objectives. We recommend tailored solutions that suit your budget, needs and ICT infrastructure. Through ongoing testing of your disaster recovery plans we quickly identify any problems and implement resolutions designed to meet the ever-changing needs of your business. Iocane is additionally able to offer remote server hosting and infrastructure capabilities.

Complementary Services

We know business needs change. We architect and implement reliable, flexible ICT solutions that evolve and leverage advances in technology and align with your business goals and requirements. Our services include:

ICT strategy

ICT consulting

ICT architecture

Infrastructure as a Service

Backup as a Service

We design and implement:

Consolidated data centres that utilise virtualisation technologies

Storage, backup and recovery solutions

Remote desktop solutions for network access 'on any device, from anywhere'

Enterprise systems for AIX, Solaris, HP-UX and IBM AS400

Iocane has the capability to design business solutions and applications that can integrate with disparate systems. This ensures you can access crucial information and applications to meet specific business requirements.

Why Iocane?

With more than 14-years of experience, we are one of South Australia's largest independent ICT solutions providers. We have a reputation for delivering innovative, value for money solutions.

We offer an integrated range of services and expertise to meet the ever-changing technology needs of business.

Our approach is different. We focus on the delivery of tailored ICT solutions that add value and deliver real results to business.

Our focus is about finding the right ICT solution for each business. We offer reliable, flexible ICT systems to help our clients manage their current and future needs.
